

CopySmart / Scanworks / ISIS / SmartLF

EASY TO USE, EFFICIENT SCAN-TO-COPY SOFTWARE

CopySmart totally eliminates the need to first scan then print files by routing live scan data directly to efficient custom-built colour profiled printer drivers. **CopySmart** is compatible with most inkjets and the majority of high-speed black and white LED printers.

Feature Summary

- High speed simultaneous scan to copy¹
- Multi-language support
- Free multiple printer choice from HP, Canon, Encad and Mutoh²
- Intuitive easy to navigate three panel interface
- Presets with filters for common copy tasks e.g. poster, photo, map, drawing or text
- Wizard controlled Profiler for ICM profile generation by the user at any time
- *start and stop* copying from the scanner control panel or screen
- Advanced black and white intelligent adaptive thresholding (IAT) copy
- Interactive preview with zoom
- 1:1, preserve aspect ratio or stretch/ compress image in x or y
- Use standard scan area sizes, auto size or type in your own
- Step and repeat and panning (copy larger than roll width) copy options
- Secondary level support via Windows driver for non-directly supported printers
- Hot folder tiff file driver for colour and monochrome printers having a rip or server
- Import common graphics file formats (except PDF)
- Bitmap insertion, colour mask and text insert
- Generate check file with copy

NOTE:

¹ some Hewlett-Packard sRGB printers only print after the complete print file is received

² under development

Seamless Blue button technology

Let CopySmart know the size of the original or use auto and then just press the big blue button – that's it!

The scanner will start to scan and soon after the printer will begin the copy. No need to worry about paper size settings on the printer, files or enlargement percentages - with CopySmart it's straightforward.

Printers

CopySmart is designed to work most effectively with roll-fed inkjet printers. The application copies the original (enlarged or reduced as required) to the chosen printer with the minimum of paper wastage. For LED printers that use a server (RIP) the high-speed CopySmart 'hot folder tiff driver' can be used. All drivers are included and can be selected or changed at any time.

Program philosophy

CopySmart was designed to provide a simple to use program without presenting a confusing array of settings and which would eliminate disappointing results sometimes encountered when trying to print a scan using a manufacturers' Windows printer driver.

Typical problems are: paper wastage, copy wrong size, copy missing edges, copy in the middle of the paper, copy with poor colour and slow print speed.

CopySmart main functions

CopySmart copies in colour, grayscale and bitonal (for blueprints). It can multi-copy, crop, enlarge, reduce and even enhance copy quality. Other features include; text and logo insertion, step & repeat (for multiple copy across roll) CMYK colour output adjustment and color replacement.

CopySmart

EASY TO USE, EFFICIENT SCAN-TO-COPY SOFTWARE

Previewing

Use the useful Preview mode to crop out unwanted scan detail before a copy without needing to scan a second time. Simply press the Copy button to process any image in the Preview window. Pressing copy from the Copy tab processes the copy based on the input size set.

Working with scan files

CopySmart allows common raster formats to be loaded, previewed, cropped and printed using the same simple 'Copy' controls.

File Formats

CopySmart can import most files in common usage in the graphics industry today.

Typical usage

CopySmart is a single printer application supporting multiple printer configurations.

Users for example can pre-configure two printers, one with draft paper for black and white check copies and perhaps a second with photo glossy paper for high quality work. The user can then switch between printers inside CopySmart as required.
