Sample Copy:	No
Auto Image Density:	No
Manual Image Density:	14 settings
Job Programming:	Yes
Size:	44.9" H x 47.2" W x 31.6" D
Weight:	174.2 lbs.
Power:	120V, 12 Amps
Other Features:	Auto Synchronized Cutting Adjustable Margin Adjustable Fusing Auto Off up to 10 copies (normal mode) up to 99 copies (SP mode)

Analog Copiers

* Product Overviews *

GEI 4047

The 4047 is a single-copy wide format machine that can either sheet feed copy paper or use semi-synchro cut, a feature used with the roll feeder option. It lets users manually select the length of copy paper to match the length of the original, a feature that does away with the need to measure and enter the length of each individual original. Alternatively, customers can feed the original into the unit once, then re-feed it to produce a copy that matches the length of the original.

GEI 4039

The 4039 is a multiple-copy unit, producing up to ten copies (and up to 99 copies using SP mode) from a single original. When operating with the roll feed option, the 4039's synchro-cut feature automatically cuts the copy to exactly match the length of the original. After the original has been fed and the copy made, it can also hold the original until the operator pushes the **Clear Stop** button
